

Material and Construction Plan.

Specification Sheet

We provide Material and Construction plans.
Our digital pack (in the form of a PDF) will consist of:

- ✓ The exact name of each material to be used;
- ✓ The amount and depth of material to be used in each area;
- ✓ The specification of the material including colour and construction;
- ✓ Recommendations for the construction of each item within the project that can be used when the work begins.

How does it work?

Upon your initial enquiry regarding a Material and Construction plan, we will offer you any advice and guidance you may need to ensure that the plan meets all of the project requirements. We will then arrange for our consultants to meet with you on site to discuss the project in more detail, along with any specific requirements that are part of the planning application or tender process. Any measurements and photographs will be taken at this point, ensuring that the plan we put together is accurate and correct.

The Material and Construction plan will then be put together by our experienced team at our offices, with liaison with yourself throughout the process regarding any existing documentation or designs and to ensure that the plan is in line with your requirements throughout.

Upon completion of the Material and Construction plan, you will be issued with a digital pack in the form of a PDF containing the top down drawing and a detailed description of the recommended construction method for every aspect. This can be incorporated into your own documentation and can be tailored as a white label document if required.

Pricing

Pricing for Planting Plans are based on a range of factors. Please get in touch for an exact quote.
